

Capital Fireplaces' has been established for almost 20 years, and is one of the UK's leading trade suppliers of Fireplaces, Fires and Stoves.

Having grown from the humble beginnings of a traditional family business we take pride in maintaining high levels of customer service and are renowned for both quality and design.

Our range combines supreme craftsmanship with style and elegance. The breadth and variety of fireplace products should suit all tastes and budgets. From cottage bedrooms to elegant drawing rooms, farmhouses to flats, there is a fireplace and a fire to complement every home.

Our latest innovations have focussed on the need to reduce the running costs and adverse environmental impact of burning the variety of fuels that our products are suitable for. We believe that if our products use fossil fuels that we should use those fuels as sparingly as possible by designing our burning units to be as efficient as possible. If we use renewable fuels across our range those products will be designed to ensure the environmental impact is kept to a minimum.

We are accomplishing this goal in three key areas:

greencast

This new brand was launched in 2010, to deliver efficient gas fires within more traditional and sometimes ornate cast iron fireplaces. We have sought from the design stage to combine the two critical components, the fires and the cast iron surrounds in unison to deliver an aesthetically pleasing integrated appliance that offers you a choice of gas fire and one of the best fuel efficiencies for any integrated appliance on the market.

Cleanburn Stoves

To burn fuel in a smoke controlled area the law determines that either the fuel should be smokeless or the appliance should be approved by Defra (The Department for Environment, Food and Rural Affairs) normally these appliances are approved by Defra for burning kiln dried wood. Some of our Defra approved products are capable of burning both kiln dried wood and anthracite in smoke control areas, a dual fuel use most cleanburn products cannot offer.

Higher Efficiency Gas Fires

We have extended our range of gas fires, suitable for numerous applications, to increase the choice that allows you to burn gas more efficiently and thereby reduce the running costs of your fire. Whether you are choosing to just replace your fire or carry out a complete refurbishment we are confident that we can offer you a product that will cost you less to run than your current old fire.

Fires

Gas Fires - Gas fires are similar to gas boilers in that they must be fitted by appropriately qualified and registered installers (GAS SAFE - formerly known as CORGI) and must be serviced regularly by a suitably qualified and registered person.

Table 1

												
	CLASS 1 Commonly in older houses, earlier than 1960. The Class 1 chimney is identifiable by 7" (180mm) or greater diameter flue. The existing chimney must be structurally sound, please check before the installation of a new fireplace.				CLASS 2 Either an older house where the existing chimney has been lined by a proprietary steel flue or a newer house with a steel flue built in. This chimney type is identifiable by a 5" (130 mm) diameter flue and a steel flue terminal.			PRE-CAST FLUE Modern houses generally later than 1960 often have a pre-cast concrete chimney system, identifiable by a rectangular box section flue and a terminal, as illustrated in the picture.			NO CHIMNEY Modern houses often have no chimney. You can use a modern decorative electric fire, either with no heat for aesthetics or an efficient fire with up to 2kW heat output.
